## fyi. Rainwear

For employees who work in rain, snow, ice or even fog conditions, there are real concerns for their safety and health. Low-visibility, slick surfaces and drops in body temperature are just a few of the hazards associated to working under these climate conditions.

Fortunately there are many types and styles of protective rainwear available for industrial use applications. Industry-oriented rainwear is generally constructed of heavier material with reinforced seams and is readily available in different styles which are suited for different tasks. Rainwear in high contrast colors such as yellow or bright green helps the wearer to be more visible. The addition of reflective materials yields highly-visible rainwear enabling a worker to be seen even in the dimmest lighting conditions.
