COMPANY PROFILE

Newcon Optik is a world leader in the design and manufacture of laser rangefinders, image intensified night vision systems, thermal imagers, and other professional grade tactical optics. Headquartered in Toronto, Canada, Newcon Optik's dealer network is present on six continents and its products are relied upon by military, government and commercial customers in more than 70 countries.

Since 1992 we have worked closely with our customers and partners to consistently produce technologically advanced products that meet and exceed the needs of the professionals they serve.

LASER RANGEFINDERS

Newcon Optik is a world leader in the laser rangefinder field. Each of our highly ruggedized models utilizes advanced laser, electronic and optical technologies not only to measure distance, but to provide a variety of other geospatial target information.

In addition to having NATO target measurement ranges spanning 1,500 to 12,000 meters, many of our models can be used with our Android™ - based application, allowing for real-time target mapping and geospatial data communication via mobile phones and tablets.

The SEEKER Series of devices are mountable laser rangefinders that boresight with any optical system—in this image, the sniper's scope. When the sniper acquires the target in his scope, he triggers the SEEKER and is fed accurate distance, inclination and azimuth data. Compatible with our Android™ - based application and other peripheral devices, the SEEKER series of LRFs represents Newcon Optik's newest addition to its industry-leading lineup.

The SEEKER S and SEEKER M represent Newcon Optik's next generation laser rangefinders. Both of these devices are mountable LRFs that can be boresighted to any optical system.

Whether mounted on a rifle, spotting scope, binoculars or thermal imager, these powerful devices instantly add long rangefinding capability in a compact, lightweight package. Used in tandem with an Android™-based application that runs on smartphones and tablets, the SEEKER S and SEEKER M provide real time distance, azimuth, inclination and GPS target data and allow for real time mapping and friendly force communication.

With NATO-standard target ranges of 2,000m and 3,000m respectively the SEEKER S and SEEKER M allow for simplified down range target data acquisition.

The SPOTTER LRF and SPOTTER LRF PRO are the first of their kind—combined spotting scope/laser rangefinder systems. They make it faster, easier and more accurate than ever before to acquire range, inclination and azimuth data on long distance targets.

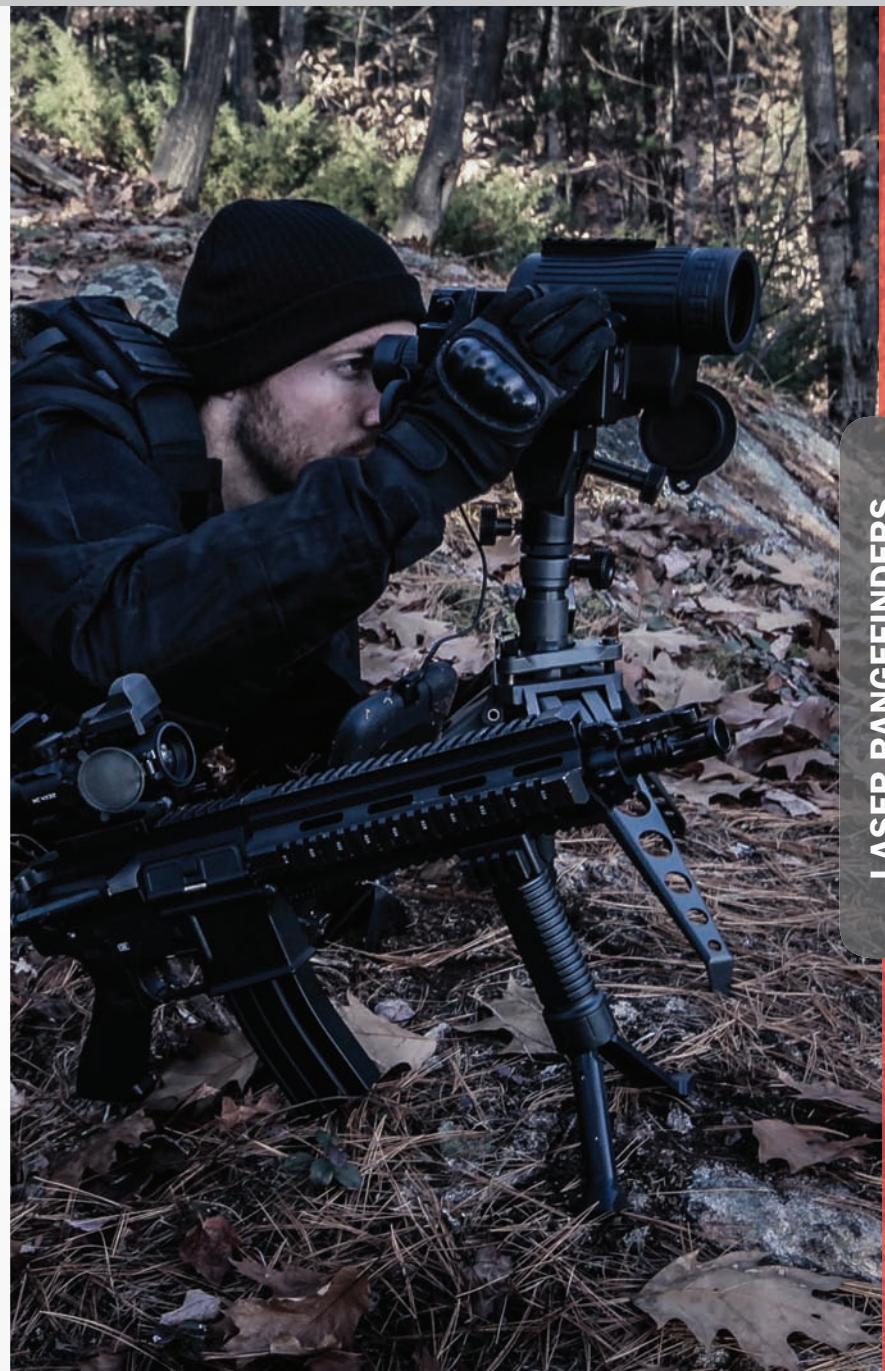

Both models are built to MIL-STD-810G standards and are fully ruggedized to handle real-world military deployment. With 15-45x variable magnification, fully multi-coated optics, an etched mil-dot reticle, USB output and LED display, the SPOTTER LRF and SPOTTER LRF PRO are among the most versatile optics you can bring with you to the field. Both are compatible with an Android™ - based application and other peripheral devices.

The LRB 12K is built to outperform any handheld laser rangefinder binocular available today. Packing a virtually endless set of performance features into a MIL-SPEC form factor, The LRB 12K can handle anything professional operators can throw its way.

A 12,000m (NATO target) measuring range, built-in digital magnetic compass, built-in GPS receiver and a crystal clear LED display.

The LRB 12K requires virtually no maintenance, and very little operational training. Through USB and RS-232 interfaces, the LRB 12K can be operated remotely, have its stored data exported and communicate with external GPS systems and ballistic computers.

The LRB 12K is newly upgraded to enable communication with Android™ based smartphones and tablets, allowing you to map and record target data for sharing or future use.

SENTINEL LRF

LONG RANGE THERMAL BIOCULAR
ADVANCED LASER RANGEFINDER
ENHANCED DETECTION CAPABILITY
ERGONOMIC DESIGN
PORTABLE

The SENTINEL LRF is the world's most capable uncooled thermal laser rangefinder system. This thermal imaging biocular is suitable in a wide variety of tactical, law enforcement, border security and special forces applications. The SENTINEL LRF utilizes a high-resolution uncooled thermal sensor to perceive differences in the thermal signature of objects within the field of view. Its small size, lightweight and excellent power efficiency make it a portable force multiplier ready for deployment in any environmental conditions.

The SENTINEL LRF can detect objects at remote distances 24 hours a day, through smoke, fog or camouflage. Its eye-safe laser rangefinder measures distances up to 5.5 kilometres as well as the azimuth and inclination of any given target. The unit's video output allows for the recording and transmission of live video or still images to other personnel as well as projection of the real-time thermal video on a portable device, computer or television monitor.

Sensor	SENTINEL LRF
Resolution version	384 or 640
Operating wavelength (μ)	7 - 14

We are proud to introduce our newest and most advanced laser rangefinder monocular we have ever produced—the LRM 3500M. This device builds on years of experience designing and manufacturing professional grade LRFs, and has a feature set never before found in a pocket-sized unit.

Like our LRB 12K series, the LRM 3500M has an in-built GPS receiver, allowing users to acquire their own and their target's GPS coordinates. Its eye-safe 1550nm laser cannot be detected by enemy night vision devices, and it can measure distance to a NATO-standard target up to 3,500m. The LRM 3500M has a full MIL-SPEC design making it rugged enough to handle what any operator can throw its way. In addition to its long measuring range it also has a digital magnetic compass, inclinometer, sharp OLED display and crystal clear optics. The data output port enables communication with a variety of peripheral devices including smartphones and tablets running an Android™ - based application.

*2.3m x 2.3m NATO standard target

The LRB 6K and LRB 4000CI are ready to go to work providing dependable, accurate distance, azimuth, inclination and speed measurements out to maximum distances of 6,000 and 4,000m respectively (NATO standard target). These binoculars pack premium optical quality and Newcon Optik's most advanced rangefinding system into a housing that is built to last.

Both units are tripod mountable, compatible with night vision monocular systems, and built to stand up to the harsh conditions on the battlefield, training course or worksite. Both units are equipped with a computer output that allows immediate data acquisition by any system with a standard RS-232 interface, including various GPS models and ballistic computers.

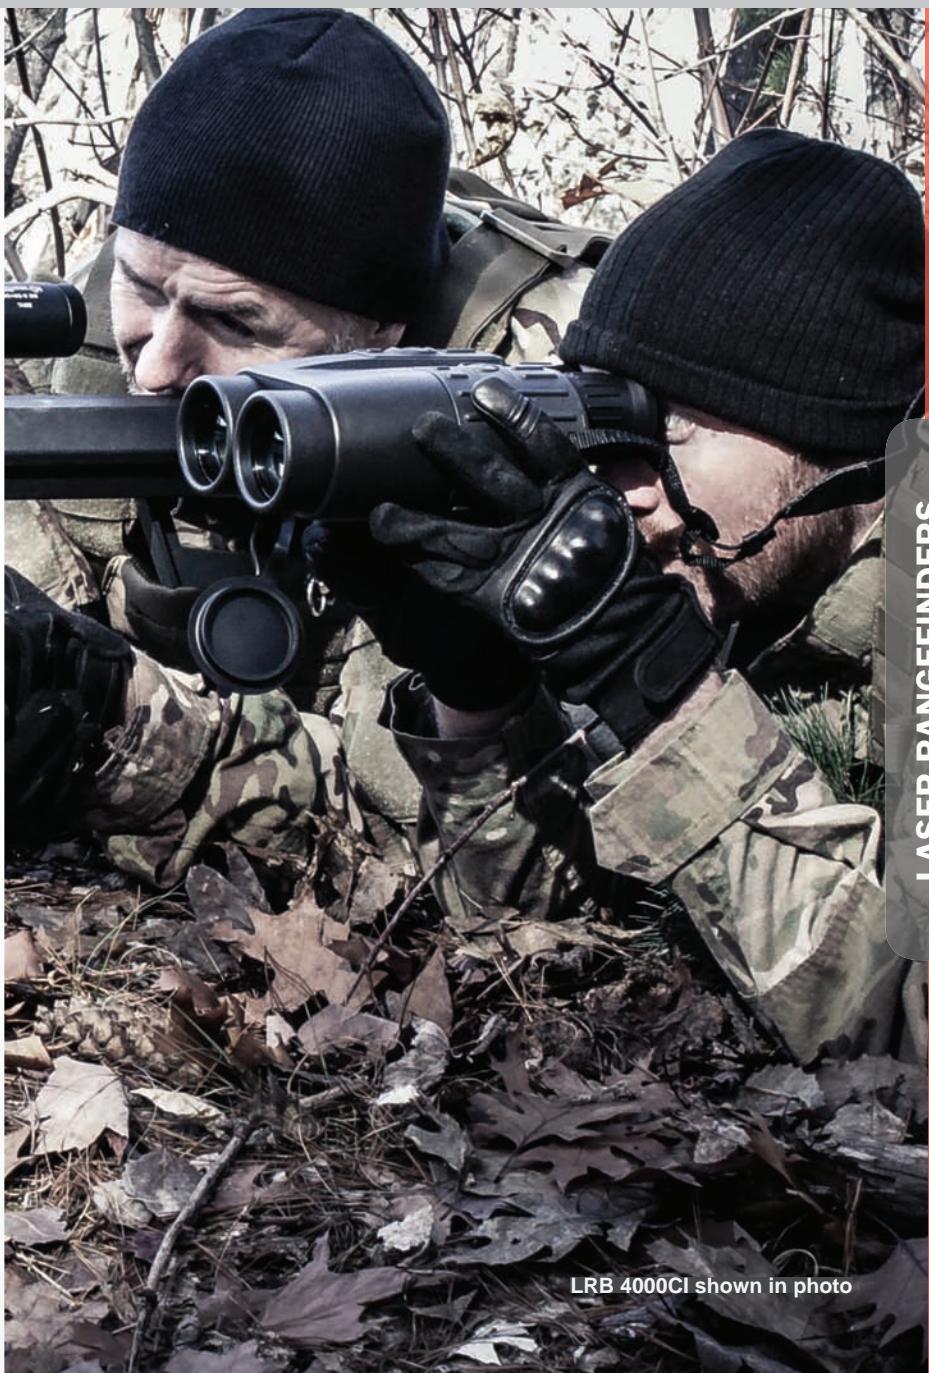

Both units are newly upgraded to enable communication with Android™ based smartphones and tablets, allowing you to map and record target data for sharing or future use.

LRB 4000CI shown in photo

Designed with professional operators in mind, the LRB 3000PRO combines compact, clear 7x40 binocular optics with a 3,000 m (NATO target) ranging capability. A built-in digital magnetic compass provides accurate azimuth and inclination readings and even target speed can be measured using this robust unit. With a matte black housing, rubberized body and scratch resistant optical surfaces, the LRB 3000PRO is built to perform and last in the harsh, foreboding environments in which our customers operate.

The LRB 3000PRO is now available with an optional high definition OLED display.

Newcon Optik's bestselling line of laser rangefinder monoculars combines industry-leading laser measurement technology, crystal clear optics and simple to use controls into a compact, sturdy package well suited to conditions in the field. The LRM 1500M is for users requiring basic functionality and high reliability. It features a true measurement range of 1,500m (NATO target) and can recall 10 measurements from device memory. The LRM 1800S features a true measurement range of 1,800m (NATO target) and performs accurate speed measurement. For border patrol, law enforcement and other professionals tasked with perimeter control, the LRM 1800S is an invaluable tool.

The LRM 2200SI features a true measurement range of 2,200m (NATO target) and is reliable in practically all weather conditions. A built-in digital magnetic compass and inclinometer enable accurate azimuth and inclination measurements.

In combination with an NVS 14 series night vision monocular, each device in the LRM line can operate 24 hours a day.

*2.3m x 2.3m NATO standard target

The LRB 20,000C is a professional laser rangefinder binocular designed for ground surveillance, target observation and distance measurement out to 20,000m. This rangefinder employs a proven time-of-flight delay algorithm to ensure accuracy and a single strong impulse to minimize exposure time. With an optional angular mount it can also measure horizontal angles and magnetic azimuth as well as vertical angles. The result of distance measurements is displayed through the eyepiece and can be transferred for processing via computer output. The unit can be remotely triggered via RS-232.

This robust rangefinder can be used in geological and engineering surveying, construction and repair works, maritime navigation, meteorology and other activities that require accurate long range distance measuring.

Designed for OEM integration, Newcon Optik's LRF module series provides accurate measurements for unmanned vehicles, fire control systems, industrial machinery, border surveillance stations and countless other applications. The newly improved MICRO series consists of four modules, each of which is barely larger than a deck of cards. Now with a ranging capability of 3,000m to a NATO standard target and a maximum ranging capability of 5,500m, these modules lead the pack in terms of their performance standards and physical size. The MICRO 1550 and 1550 (CI) utilize a 1550nm laser that cannot be seen by image intensified night vision systems. Each 'CI' variant incorporates a digital magnetic compass and inclinometer for vector measurement and enhanced spatial data collection.

All Newcon Optik OEM modules support the RS-232 interface. Other features include gating capability, fast scan mode, speed measurement, and object selection.

LRF MICRO integration
with Talon Universal Weapon
Mount

Typical use of Mod 6EC

The MOD 4EC and MOD 6EC were designed specifically for remotely operated small platforms. In addition to their outstanding functionality, these modules can be attached to Mini-Typhoon, CLAWS and other systems with a quick release mount. The units are designed to endure the harsh operating conditions of the real world. Both models can withstand high vibration, a wide temperature range, dust, rain and RF jammers. The LRF MOD 4EC and LRF MOD 6EC provide distance, speed, azimuth and elevation measurements. Other features include gating, fast scan and target selection.

Both units can be integrated with other systems and communicate via RS-232. In designing these LRF modules for precision target acquisition, special attention was given to the ability to boresight the unit with a pre-designed optical platform. A removable visual eyepiece and a video camera attachment are provided to enable quick boresighting and visual integration with other observation systems.

AGBW Series

The AGBW series consists of advanced Generation 3 IITs with world-leading GaAs photocathode sensitivity and FOM. This series of IIT, like the AG series, incorporates an auto-gating system that automatically adjusts itself to limit the impact of changing light conditions—the effect of muzzle flash, vehicle lights and other intermittent battlefield light sources is significantly reduced by auto-gating technology. The black and white image produced by the AGBW series reduces eye strain and provides better contrast in certain light conditions.

AG Series

The AG series consists of advanced Generation 3 IITs with world-leading GaAs photocathode sensitivity and FOM. This series of IIT, like the AGBW series, incorporates an auto-gating system that automatically adjusts itself to limit the impact of changing light conditions—the effect of muzzle flash, vehicle lights and other intermittent battlefield light sources is significantly reduced by auto-gating technology.

XT Series

The XT series consists of advanced Generation 3 IITs with world-leading GaAs photocathode sensitivity and FOM.

The NVS 14 series of night vision monoculars have been proven in deployments in conflict zones and by peacekeepers around the world. All models utilize advanced Gen 3 image intensifier tubes, with minimum, exportable FOM >1600, have a manual gain control system, built-in IR illuminator, auto shutoff mechanism and are fully MIL-SPEC.

The newly improved NVS 14-3AG and NVS 14-3AGBW models are now, at 265g, the lightest night vision monoculars utilizing full sized IITs available today. Both systems are auto-gated while the NVS 14-3AGBW produces a black & white image rather than the traditional green.

All models are MIL-STD-810G, but with the GCS upgrade can be made submersible to 20 meters for 1 hour. Each NVS 14 series device can be handheld, weapon, head or helmet mounted. With optional lens attachments that turn either model into a 3x or 5x night vision sight and a full range of additional accessories the NVS 14 series is among the world's most versatile night vision devices.

The NVS 15 series of night vision goggles have been proven in deployments in conflict zones and by peacekeepers around the world. All models utilize two advanced Gen 3 image intensifier tubes, with minimum, exportable FOM >1600, have a manual gain control system, built-in IR illuminator, auto shutoff mechanism and are fully MIL-SPEC.

The newly improved NVS 15-3AG and NVS 15-3AGBW are now the lightest dual tube goggles available today. Both systems are auto-gated while the NVS 15-3AGBW produces a black & white image rather than the traditional green.

The NVS 15 series provides users with full depth perception and is ideal for vehicle operation and any other dark environment task requiring acute situational awareness. The modular design of the NVS 15 allows for the detachment of the left or right eye device while the proprietary bridge mount provides for interpupillary and other fine adjustments.

All models are MIL-STD-810G, but with the GCS upgrade can be made submersible to 20 meters for 1 hour. Each monocular module in the NVS 15 can be handheld, weapon, head or helmet mounted. With optional lens attachments that convert the NVS 15 into 3x or 5x binoculars and a full range of additional accessories, the NVS 15 series is among the world's most versatile night vision devices.

Based on the popular NVS 7-3AG night vision goggles series, the NVS 7 binocular series models are suitable for defence, marine and SAR operations that take place in the world's darkest tactical environments. Available in 4x, 5x and 8x magnification configurations there is a binocular model for virtually any detection, recognition, identification requirement. All models are auto-gated.

The NVS 7-3/4xAG is the smallest and lightest handheld night vision binocular in its class while the NVS 7-3/5xAG provides an excellent visibility range while remaining compact and functional and the NVS 7-3/8xAG incorporates a unique catadioptric lens with a large aperture, making it indispensable for long range observation at night. The 8x model is equipped with a $\frac{1}{4}$ " tripod socket.

NVS S Mount

Shroud compatible helmet mount for monoculars and goggles

NVS H Mount

PASGT compatible helmet mount for monoculars and goggles

NVS FS Mount

Flip-to-side, quick release Picatinny weapon mount for monoculars

NVS DS and NVS SW

Demist Shield to prevent eye-piece fogging and sacrificial window to protect objective lens of monoculars and goggles

NVS Bridge

Connecting bridge for conversion of two monoculars into dual tube goggles

NVS Cam/Video

Connects monoculars to video and still cameras

Hard Case (various sizes)

MIL-SPEC case to protect any device during transportation and storage

NVS Lens 3x

Afocal 3x magnification add-on lens for monoculars and goggles

NVS Lens 4x

Catadioptric 4x magnification add-on lens for monoculars and goggles

NVS U Coupler Set

Connects monoculars and goggles to any Newcon Optik LRF or day optic for night operation

NVS Lens 5x

Catadioptric 5x magnification add-on lens for monoculars and goggles

NVS Lens 8x

Catadioptric, tripod mountable 8x magnification add-on lens for monoculars and goggles

The NVS 27 is Newcon Optik's most advanced night vision clip-on series to date and represents a significant improvement on other clip-on systems currently available. This high-resolution unit is designed to mount in front of virtually any daytime riflescope. It differs from the competition in many ways, but primarily in its compatibility with day sight magnifications between 1x and 20x. As military and police shooters continue to use higher magnification day sights, this compatibility range provides a significant advantage in the field, enabling the use of most, if not all, of a given day sight's magnification capability.

The NVS 27 series was designed by shooters, and its extra wide field of view, manual gain control system and extended target detection range make it the world's most complete night vision clip-on system.

The DN 463 is a military grade night vision riflescope and is the scope of choice for tactical operators requiring a night time CQB and/or medium range target engagement capability. Fully weatherproof, with a nitrogen filled optical channel the DN 463 can be used in virtually any combat environment.

The DN 493_6x is a member of Newcon Optik's next generation night vision riflescope series. This 6x magnification riflescope features a manual gain control adjustment; an advanced Gen 3 image intensifier tube; a MIL-DOT, LED-lit reticle with adjustable brightness; a Picatinny rail mount; removable infrared illuminator; and tactile windage and elevation adjustments. This scope is easy to service and maintain, and presents one of the lowest lifetime costs of ownership amongst riflescopes in its class.

The DN 493_6x is battle hardened and ready for deployment in combat, peacekeeping as well as public and private infrastructure security.

The NVS 6-3XT and NVS 9-3AG ANVIS goggles enable pilots to operate their aircraft in the darkest flight environments. These goggles allow aviators to navigate at the nap of the earth, take off, land and perform other operations that are otherwise impossible at night without the use of a light source.

Adjustable 25 mm eyepieces provide improved eye relief enabling excellent viewing regardless of the eyepiece positioning. Ergonomically designed interface controls including interpupillary adjustments and vertical, fore-aft and tilt adjustments allow improved viewing of the entire system field of view. The lightweight goggles can be mounted on a variety of aviator helmets. Newcon Optik's expert team is able to ensure you select the right goggle for your aircraft and its cockpit lighting system.

The NV 207-G2 and NV 66-G2 provide optical advantage in a variety of situations in which a night vision capability is required. These Gen 2+ systems do not require an export permit.

The NV 207-G2 uses the same approach to night vision as the NVS 14 night vision monocular series while the NV 66-G2 features many of the advantages of the NVS 7 night vision goggle series.

A large variety of available accessories allow both units to be applied to a number of real world applications including game reserve management, private and public infrastructure security and, where allowed by law, hunting and other outdoor activities

THERMAL IMAGING SYSTEMS

MONOCULARS

BIDUCULARS

RIFLESCOPES

The SENTINEL LRF is the world's most capable uncooled thermal laser rangefinder system. This thermal imaging biocular is suitable in a wide variety of tactical, law enforcement, border security and special forces applications. The SENTINEL LRF utilizes a high-resolution uncooled thermal sensor to perceive differences in the thermal signature of objects within the field of view. Its small size, lightweight and excellent power efficiency makes it a portable force multiplier ready for deployment in any environmental conditions.

The SENTINEL LRF can detect objects at remote distances 24 hours a day, through smoke, fog or camouflage. Its eye-safe laser rangefinder measures distances up to 5.5 Kilometres as well as the azimuth and inclination of any given target. The unit's video output allows for the recording and transmission of live video or still images to other personnel as well as projection of the real-time thermal video on a portable device, computer or television monitor.

The SENTINEL contains the same detection features as the SENTINEL LRF without the laser rangefinder capability.

The TVS 11M tactical thermal monocular is the next generation of Newcon Optik's tried and tested thermal monocular series. As a lightweight and compact handheld, helmet or weapon mounted device, the TVS 11M is well suited to a variety of tactical, law enforcement, search and rescue and industrial applications. The TVS 11M utilizes passive infrared sensing technology allowing users to detect extremely small differences in the temperature of objects, people and other heat sources within the field of view.

Unlike traditional night vision devices, the TVS 11M can be operated 24 hours a day, in daytime and at night, even in the total darkness of an enclosed space, has the ability to see through smoke, fog and other obscurants, boasts a variety of colour and contrast settings and digital zoom capability. The TVS 11M can also be connected to external display devices allowing other parties to view the observed image in real time.

THERMAL IMAGING SYSTEMS

The TVS 13M thermal riflescope series is designed to act as a force multiplier in the most demanding situations faced by border patrol, law enforcement, tactical team snipers and special operations forces. The TVS 13M functions effectively in CQB, medium and long range target engagement applications. Advanced in-built ballistics software allows for accurate firing on virtually any weapon platform, while a video output port and internal storage capability enable the capture of video and still images. With its extended range capability the TVS 13M (75) is ideal for long range applications.

The TVS 13M comes standard with a Picatinny quick release mount and can also be used as a hand-held observation tool. Unlike traditional night vision devices, the TVS 13M operates 24 hours a day without any degradation in performance when used in daylight, smoke or fog and it can also penetrate camouflage.

With a variety of other features including image polarity selection, sepia, rainbow and other colour options, a proximity sensor and full MIL-SPEC design, the TVS 13M is the right choice for tactical applications in any environment.

All TVS 13M models are now available with inclinometer and stability sensor.

TACTICAL OPTICS

The LAS 1000 detects snipers and other forward observers before they fire a shot. This system is ideal for border and perimeter security as well as VIP protection details. While most sniper detection systems are acoustic and help operators respond to a threat after it has already inflicted damage, the LAS 1000 functions on optical principles and can therefore pinpoint the location of a threat before it has a chance to act.

Utilizing an eye-safe laser scanner, the LAS 1000 detects lenses and reflectors in its line of site even if these objects are covered behind bushes, windows or windshields. The detector can be handheld or mounted on a tripod and when an optical reflector of any kind is detected, its position is marked. For added situational awareness, an audio signal can also be set to automatically activate upon the detection of a threat.

The LAS 1000 now has in-built GPS to determine the precise coordinates of detected threats.

NC 1x21 with 3x magnifier shown in photo

NC 1x21

HDS 3AA

The NC 1x21 and HDS 3AA red dot sights were designed and built for tactical law enforcement and military applications. Both sights allow rapid, accurate target acquisition for close-quarters battle (CQB) and are built with rugged, durable single-piece frames.

The compact NC 1x21 is ideal for short range CQB engagements. It has a variety of brightness settings and is fully compatible with night vision devices. Weighing in at just 132 grams, the NC 1x21 is an extremely lightweight upgrade to any weapon system.

The tried and tested HDS 3AA is better suited to longer range engagements than the NC 1x21. Its multiple brightness settings and precise step adjustments make it accurate in conjunction with a wide variety of assault rifles. Fully compatible with night vision devices, the HDS 3AA can also be used with a 3x or 5x magnification flip-to-side add-on lens, allowing for extended viewing and engagement capability.

The NC 4x32 and NC 6x50 are trusted members of Newcon Optik's line of weapon mounted tactical day optics. These devices feature 4x and 6x fixed magnification respectively and are therefore ideal for short to medium range target acquisition. Both units feature an LED-lit Mil-Dot ranging reticle with multiple green and red brightness settings. These units can be used in conjunction with night vision devices and are compatible with virtually all assault rifles.

The NC 4x32 and NC 6x50 are highly precise, ruggedized sights and have been battle tested in a wide variety of environmental conditions. These are the right choice for military and police professionals requiring a fixed magnification weapon sight for CQB and medium range assault rifle target engagements.

The optional backup red dot sight (NC BURD) enables rapid target acquisition even at close range.

Optics	NC 4x32	NC 6x50
Maximum magnification (x)	4	6

SPOTTER ED shown in photo

Newcon Optik's spotting scope series takes a big leap forward in 2016 with the introduction of the SPOTTER LRF and SPOTTER LRF PRO, the first of their kind combined spotting scope/laser rangefinder systems. They make it faster, easier and more accurate than ever before to acquire range, inclination and azimuth data on long distance targets. Both models are built to MIL-STD-810G standards and are fully ruggedized to handle real-world military deployment. With 15-45x variable magnification, fully multi-coated optics, an etched mil-dot OLED reticle, USB output and LED display, the SPOTTER LRF and SPOTTER LRF PRO are among the most versatile optics you can bring with you to the field. Both are compatible with our Android™ - based application and other peripheral devices.

The Spotter ED and Spotter M continue to provide world class optical quality in fully ruggedized, portable form factors—the Spotter M weighs in at under 300g.

Optics	SPOTTER ED	SPOTTER M
Magnification (x)	20 - 60	8
Objective lens diameter (mm)	85	42
Focus range (m)	7 - ∞	3 - ∞
Eye relief, (mm)	20 - 18	18

SPOTTER M

Newcon Optik's LAM series of weapon mounted laser aimers and illuminators are in service with military and police organizations worldwide. These military grade devices utilize powerful visible and infrared lasers to provide accurate aiming and bright night vision illumination from any weapon system or optical platform.

The LAM 3G is a three-channel laser featuring a green visible laser aimer, an IR laser aimer and an IR illuminator. It has solid audible/tactile step adjustment mechanisms that are easy to use and hold their positions after thousands of discharges. With a low power training mode and a high power in-field mode, this device can be safely utilized among friendly forces and quickly powered up for real-world target engagements.

The LAM 10D is a single channel IR laser aimer designed to reach out to 1,000m. For night operations, this simple, extremely lightweight device is the right choice for professional operators demanding unrivalled performance and reliability.

Laser Aimer	LAM 3G	LAM 10D
Eye safety	IIIb	IIIb
Distance, high / low (m)*	V:150/500 ; IR: 200/2,000	IR:1,000

NCFL 10 shown in photo

The NCFL Series is comprised of compact, mountable illumination/aiming systems that can be utilized on a wide variety of weapons including handguns and assault rifles. Each model in this series has a distinctly unique feature set, ensuring there is an NCFL unit perfectly suited to every application.

NCFL 10: The only compact illuminator/aimer to feature a built-in digital camera, that allows continuous video recording of armed encounters. This model also has a visible light illuminator and visible laser aim.

NCFL 9GI & NCFL 9RI: These models both have ultra-bright visible light illuminators, infrared aiming lasers for use with night vision devices and visible laser aimers (green in the GI variant and red in the RI variant).

NCFL 9G & NCFL 9R: These models both have ultra-bright visible light illuminators and visible aiming lasers (green in the G variant and red in the R variant).

NCFL 9: This model has an ultra-bright visible light illuminator and an infrared laser for use with night vision devices.

The IRIL 1000M long range infrared aimer and illuminator now features a high powered visible laser aiming channel. This device is designed to reach out to extreme distances to aid in target identification and engagement from ground and air based platforms. Equipped with a Picatinny quick release mount, the IRIL series of illuminators can be mounted on virtually any rifle platform, or crew-served weapon system. The IRIL 1000M has 5 in-built laser patterns to select from to aid in laser identification.

The IRIL 1000M has an adjustable beam divergence between 1 and 20 mrad allowing for immediate transition between wide area spot scene illuminator and accurate IR laser aimer. Its extreme long maximum range provides significant optical advantage to professional night operators in all environmental conditions.

The AN series of binoculars incorporates Porro prisms and multi-coated lenses, delivering impressive light transmission and resolution for brilliantly clear vision. Non-slip UV-resistant rubber armouring makes these binoculars comfortable to operate even in cold weather. They are waterproof and shockproof, feature a military reticle and compass (AN 7x50 MC only) and adhere to the latest military standards while remaining light and compact.

The BIG EYE 28x100ED is designed to meet the most demanding specifications and is capable of withstanding maritime weather. It is useful as a marine binocular, a border guarding instrument, or with other applications where long-range viewing is required.

The BIG EYE 28x100ED has massive objective lenses, BAK-6 prisms and precision ground, multi-coated optics. Optical quality is extraordinary with true edge-to-edge image clarity. Oversized, individually focusing ocular lenses are set at an angle for comfortable viewing, and have foldable eyecups. The mounted device swivels a full 360° horizontally and 135° vertically. The instrument is nitrogen-filled to prevent fogging. The BIG EYE 28x100ED is supplied with a hard case equipped with a lock. It can also be coupled with one or two NVS 14 series night vision monoculars for night operation.

HDS 3x Lens

Flip-to-side 3x magnification add-on lens for use with HDS 3AA

HDS 5x Lens

Flip-to-side 5x magnification add-on lens for use with HDS 3AA

TACT 3-S Tripod

MIL-SPEC non-magnetic tripod for use with all tripod-mountable devices

NC BURD

Back up red dot sight for use as a standalone aimer or back up to other optics (mountable on any device with Picatinny rail)

NC 4x32 ARF & NC 6x50 ARF

Anti-reflection filter for use with NC 4x32 and NC 6x50 (ARF available for other devices upon request)

30mm QR Scope Mount & 34mm QR Scope Mount

Quick-release Picatinny sniper scope mounts

The SIB 16x40WP gyro stabilized binoculars incorporate gyroscopic image stabilization technology that enables the user to observe distant objects from moving platforms without image resolution degradation caused by mechanical vibration or natural hand tremor. Combining fully coated optics with a high-speed gyro stabilizing system, the SIB 16X40WP binoculars are the ultimate instrument for long-range observation, tracking and surveillance.
